Introduction

These release notes describe changes made to the Trimble® Infrastructure NetRS® series receivers. With this release, the receivers can use version 1.3-2 firmware.

This is a minor release that primarily addresses several security-related enhancements.

To date, Trimble has not received any reports of user-installed receivers that have had their security compromised. However, recent trends within the industry indicate increasing cyber-attacks. Therefore, Trimble strongly recommends that you upgrade to firmware version 1.3-2, and review the security implemented in your receiver.

For a general guideline on receiver security, go to:

http://trl.trimble.com/dscgi/ds.py/Get/File-636175/InfrastructureSupNote_NetRx%20Security%20Guidelines.pdf

Given the security-related aspect of this release, all Trimble NetRS receivers are entitled to install this firmware version regardless of the current firmware warranty date.

Before you upgrade the firmware, download and back up any files or configuration settings.

Changes

Security

This release includes updates to help protect the NetRS receiver against several types of network and RF-based attacks that were identified during security vulnerability assessments.

Upgrading the firmware

1. Make sure that the receiver has sufficient free memory to upload the firmware file.
2. Use the NetRS browser interface to upload the file onto your receiver.
3. Click **Install**.

The installation process will take several minutes.
