To check the current data pool (Autodelete) settings go to -
Programmatic Interface - Sessions - Show AutoDelete

To check total available memory for data storage go to -
Data Logging Status
Look mid-page for a line similar to -
"**Logging Space: 776.156 Mbytes Used.   98.742 Mbytes Available**"
Logging Space + Available = Total. If the receiver has a 1GB card Total should be
approximately 875MB. The sum of all pool sizes can be no larger than this Total.

Note:
!!! Before clicking on "Set AutoDelete" uncheck the "AutoSubmit" button!!!!!

To change the data pool (Autodelete) settings go to -
Programmatic Interface - Sessions - Set AutoDelete

Enter the proper command in the send window then click the "Send" button.
The syntax for the command is as follows.

Example - **Set?AutoDelete Reserved=1,yes a=500,yes Default=50,yes**

Set?	<- Required 'Set' command start syntax.
AutoDelete Reserved=1,yes	<- Sets the minimum amount of free data logging space (Reserved) in MB. In this example it is set to **1**MB. The **yes** sets AutoDelete to ON.
a=500,yes	<- Sets pool name (**a**), sets pool size in MB (**500**), and sets AutoDelete to ON (**yes**).
Default=50,yes	<- Sets pool name (**Default**), sets pool size in MB (**50**), and sets AutoDelete to ON (**yes**).

Example 2 - **Set?AutoDelete Reserved=10,yes a=200,yes b=200,yes c=395,yes m=5,yes**

-sets minimum reserve space to 10MB and enables
-sets pool a to autodelete after 200MB and enables
-sets pool b to autodelete after 200MB and enables
-sets pool c to autodelete after 395MB and enables
-sets pool m to autodelete after 5MB and enables
